## Structure

Information Architecture

The home page will be divided into two section sections.
On the menu on top, there will be links to the pages. (Adventures, Experience and Gallery)

Interaction Design (IXD)
- Social Media icons will have roll-over effects and open a new window(_blank) so the user can access it without losing connection to the page. Icons will be placed on top of the pages, at all times.
- The background image has a parallax effect, so the user can experience a nice and smooth transition.
- Each picture in the gallery has alt attribute in case the image is not displayed

- Each photo in the gallery page contains an effect, once the user clicks on it, they should be able to see only one increased image and left and right arrow.
- The menu bar on the top of the page turns into a hamburger icon, as it would take less space when accessing the page through a phone
- The Menu bar is fixed on the top o the page at all time.
- When contacting us, the text area is required
